"Low fruit and vegetable intake is among the top 10 selected risk factors for global mortality." –World Health Organization (WHO)

ORAC VALUE OF 9000+ PER SERVING

What does ORAC really mean?

The acronym ORAC stands for — Oxygen Radical Absorbance Capacity. The ORAC analysis of a given product or food measures the ability of the item to protect against free radical attack, or its ability to act as an antioxidant. The ORAC value of certain fruits and vegetables is higher than others, therefore able to protect the body from free radical damage to the cells in our bodies. Free radical damage has been attributed to the process of aging, disease, and many other medical complications. Studies suggest that foods with a higher ORAC value may be helpful in protecting our bodies from premature aging and supporting optimal health.

MANGOSTEEN

What does mangosteen do?

There is ever unfolding research on the health properties of the mangosteen (*Garcinia mangostana*). Recent research suggests that mangosteen provides powerful antioxidant protection and phytonutrients that support multiple body functions. It is no wonder that a growing number of health practitioners are using mangosteen in their clinical practices.

ORGANIC SDG FLAX LIGNANS CONCENTRATE

What are flax lignans?

It has been proven that essential fatty acids in flaxseed oil help prevent heart disease, improve skin and hair, aid in cell production, and aid in

weight reduction, as well as provide other health benefits. But hidden within the thin hull surrounding the flaxseed is a compound that may surpass flax oil — SDG lignan (secoisolariciresinol diglucoside).

Lignans are a group of phytonutrients (plant nutrients) which are found in seeds, grains, and vegetables. Flax seed hulls are the richest source of plant lignans — the oil has little or no lignans.

The SDG lignan has anti-viral, anti-bacterial, and anti-fungal properties, is a potent antioxidant, and has been shown to enhance immune system functioning.

CONCENTRACE® IONIC TRACE MINERALS

What are ionic trace minerals?

Because your body requires nearly two thirds of all the elements currently known to man in order to maintain health, keeping these minerals in balance is a complex, yet incredibly vital task. The everyday events of life demand a continual ingestion of minerals.

Perhaps that is why an estimated 90% of Americans suffer a mineral deficiency or imbalance.

Unfortunately in today's world, naturally occurring, nutrient-rich foods are becoming a thing of the past. Eons of vegetation growth and aggressive modern farming techniques have brought many of the earth's minerals to the surface where they have been washed away to the oceans.
